

TABLE OF CONTENTS

1 Cyclic Loading of a Specimen with a Slipping Crack

1.1	Problem Statement	1 - 1
1.2	Conceptual Model	1 - 3
1.3	<i>UDEC</i> Model	1 - 5
1.4	Results and Discussion	1 - 7
1.5	References	1 - 8
1.6	Listing of Data Files	1 - 9

2 Sliding Block between Two Slightly Skewed Rigid Walls

2.1	Problem Statement	2 - 1
2.2	Analytical Solution	2 - 2
2.3	<i>UDEC</i> Model	2 - 4
2.4	Results and Discussion	2 - 5
2.5	Reference	2 - 7
2.6	Listing of Data Files	2 - 8

3 Thick-Walled Cylinder Subject to Internal Pressure

3.1	Problem Statement	3 - 1
3.2	Analytical Solution	3 - 2
3.3	<i>UDEC</i> Model	3 - 4
3.4	Results and Discussion	3 - 5
3.5	References	3 - 6
3.6	Listing of Data Files	3 - 7

4 Response of an Unlined Circular Tunnel in a Biaxial Stress Field

4.1	Problem Statement	4 - 1
4.2	Analytical Solution	4 - 1
4.3	<i>UDEC</i> Model	4 - 5
4.4	Results and Discussion	4 - 8
4.5	References	4 - 12
4.6	Listing of Data Files	4 - 13

5 Circular Tunnel Problems

5.1	Problem Statement	5 - 1
5.2	Analytical Solutions	5 - 2
5.2.1	Cylindrical Hole in an Infinite Elastic Medium	5 - 2
5.2.2	Cylindrical Hole in an Infinite Mohr-Coulomb Medium	5 - 3
5.2.3	Lined Tunnel in an Infinite Elastic Medium	5 - 4
5.3	<i>UDEC</i> Models	5 - 5
5.4	Results	5 - 7
5.5	References	5 - 13
5.6	Listing of Data Files	5 - 14

6 Elastic Behavior of a Jointed Medium

6.1	Problem Statement	6 - 1
6.2	<i>UDEC</i> Model	6 - 3
6.3	Results	6 - 4
6.4	References	6 - 6
6.5	Listing of Data Files	6 - 7

7 Crack Shear by Reduced Friction

7.1	Problem Statement	7 - 1
7.2	<i>UDEC</i> Model	7 - 2
7.3	Results	7 - 3
7.4	Listing of Data File	7 - 5

8 Rough Footing on a Mohr-Coulomb Material

8.1	Problem Statement	8 - 1
8.2	Analytical Solution	8 - 1
8.3	<i>UDEC</i> Model	8 - 2
8.4	Results and Discussion	8 - 5
8.5	References	8 - 8
8.6	Listing of Data File	8 - 9

TABLES

Table 1.1	Joint parameters	1 - 6
Table 2.1	Comparison of <i>UDEC</i> results using various zone sizes with analytical solution for sliding block between two slightly skewed rigid blocks. (Results shown are total sliding distance, m.)	2 - 5
Table 3.1	Comparison of <i>UDEC</i> and analytic results for thick-walled cylinder problems	3 - 5
Table 4.1	Loading steps for circular tunnel in a non-hydrostatic stress field	4 - 5
Table 4.2	Calculated closure from Detournay solution	4 - 8
Table 4.3	Comparison of <i>UDEC</i> results to Detournay solution	4 - 9

FIGURES

Figure 1.1	Specimen with embedded crack	1 - 1
Figure 1.2	Stress-displacement relation for elastic specimen with embedded crack subjected to uniaxial load	1 - 2
Figure 1.3	Conceptual model of an elastic specimen containing an embedded crack ...	1 - 3
Figure 1.4	Zoning for slipping crack model	1 - 5
Figure 1.5	Axial stress versus axial displacement for load cycling of a specimen with a slipping crack modeled with the Coulomb friction law	1 - 7
Figure 1.6	Axial stress versus axial displacement for load cycling of a specimen with a slipping crack modeled with the continuously yielding joint model	1 - 8
Figure 2.1	Sliding block between two slightly skewed rigid walls	2 - 1
Figure 2.2	Position of upper rigid block, and discretization of elastic block into constant strain finite difference triangles for nominal zone size of 0.055 m	2 - 4
Figure 2.3	Distribution of normal stress on top surface of sliding elastic block for nominal zone size = 0.205 m	2 - 6
Figure 2.4	Distribution of normal stress on top surface of sliding elastic block for nominal zone size = 0.125 m	2 - 6
Figure 2.5	Distribution of normal stress on top surface of sliding elastic block for nominal zone size = 0.055 m	2 - 7
Figure 3.1	Elastic-plastic analysis of a thick-walled cylinder	3 - 1
Figure 3.2	Discretization of thick-walled cylinder into constant strain finite difference triangles	3 - 4
Figure 3.3	Comparison between <i>UDEC</i> and analytical solutions	3 - 6
Figure 4.1	Normalized radial displacements (U_r) results of closed-form solution	4 - 4
Figure 4.2	Plot of “glued” joints in <i>UDEC</i> model used to improve zonal discretization in model	4 - 6
Figure 4.3	<i>UDEC</i> model	4 - 7
Figure 4.4	Comparison of crown and springline closures for <i>UDEC</i> and analytic solutions Table 2 – U_r^s , <i>UDEC</i> Table 3 – U_r^c , <i>UDEC</i> Table 4 – U_r^s , analytic solution Table 5 – U_r^c , analytic solution	4 - 10
Figure 5.1	Three variations to the circular tunnel problem (after Wart et al. 1984)	5 - 2
Figure 5.2	Coarse zoning used in circular tunnel problems	5 - 6
Figure 5.3	Finer zoning used in circular tunnel problems	5 - 7
Figure 5.4	Comparison of <i>UDEC</i> results of radial and tangential stresses versus radial distance along a line $\theta = 0^\circ$, with analytical solution for the case of a tunnel in an elastic medium with a biaxial stress field	5 - 8
Figure 5.5	Comparison of <i>UDEC</i> results of radial and tangential displacements versus radial distance along a line $\theta = 0^\circ$, with analytical solution for the case of a tunnel in an elastic medium with a biaxial stress field	5 - 9

Figure 5.6	Comparison of <i>UDEC</i> results of radial and tangential stresses versus radial distance along a line $\theta = 0^\circ$, with analytical solution for the case of a tunnel in Mohr-Coulomb medium with a biaxial stress field	5 - 10
Figure 5.7	Comparison of <i>UDEC</i> results for lining thrust with analytical solution for the case of a lined tunnel in an elastic medium with a biaxial stress field	5 - 11
Figure 5.8	Comparison of <i>UDEC</i> results for lining moment with analytical solution for the case of a lined tunnel in an elastic medium with a biaxial stress field	5 - 12
Figure 6.1	Rock mass containing staggered joints	6 - 1
Figure 6.2	<i>UDEC</i> model containing two orthogonal joint sets with staggered joints; zoning is also shown	6 - 3
Figure 6.3	Comparison of results for <i>n</i> -direction load cycling	6 - 5
Figure 6.4	Comparison of results for <i>s</i> -direction load cycling	6 - 5
Figure 7.1	Crack slip by reduced friction	7 - 1
Figure 7.2	<i>UDEC</i> model – two blocks with triangular finite-difference zones in each block	7 - 2
Figure 7.3	Shear displacement along slipping crack	7 - 3
Figure 7.4	Comparison of results for crack shear (Table 1: <i>UDEC</i> , Table 2: analytical solution)	7 - 4
Figure 7.5	<i>xx</i> -stress contours	7 - 4
Figure 8.1	Prandtl's wedge problem of a strip footing on a frictionless soil	8 - 2
Figure 8.2	<i>UDEC</i> model boundary conditions	8 - 2
Figure 8.3	<i>UDEC</i> zone geometry for strip footing – single-block model	8 - 4
Figure 8.4	<i>UDEC</i> zone geometry for strip footing – two-block model with diagonal construction joint	8 - 4
Figure 8.5	Steady state <i>x</i> -velocity contours and velocity vectors at collapse load for strip footing	8 - 6
Figure 8.6	History of strip footing load; exact solution also shown – single-block model	8 - 6
Figure 8.7	History of strip footing load; exact solution also shown – two block model (zoning by GENERATE edge)	8 - 7
Figure 8.8	History of strip footing load; exact solution also shown – two-block model (zoning by GENERATE edge with SET nodal on)	8 - 7

EXAMPLES

Example 1.1	SLIP.DAT	1 - 9
Example 1.2	SLIP_CY.DAT	1 - 12
Example 1.3	SLIP.FIS	1 - 15
Example 2.1	SKEW_IN.DAT	2 - 8
Example 2.2	SKEW_PR.DAT	2 - 10
Example 2.3	SKEW.DAT	2 - 11
Example 3.1	CYL_IN.DAT	3 - 7
Example 3.2	CONT_CYL.FIS	3 - 9
Example 3.3	CYL.DAT	3 - 14
Example 4.1	TUN_IN.DAT	4 - 13
Example 4.2	CONT_TUN.FIS	4 - 15
Example 4.3	TUN.DAT	4 - 18
Example 5.1	CYLBE_IN.DAT	5 - 14
Example 5.2	CONT_CB.FIS	5 - 15
Example 5.3	CYLBE.DAT	5 - 20
Example 5.4	COMP_A.FIS	5 - 26
Example 5.5	COMP_B.FIS	5 - 31
Example 5.6	COMP_C.FIS	5 - 34
Example 6.1	N_LOAD.DAT	6 - 7
Example 6.2	S_LOAD.DAT	6 - 9
Example 6.3	SINGH.FIS	6 - 11
Example 6.4	N_LOAD.FIS	6 - 11
Example 6.5	S_LOAD.FIS	6 - 12
Example 7.1	CRACK.DAT	7 - 5
Example 8.1	PRAN.DAT	8 - 9
