

PRECIS

This volume contains complete documentation on the built-in programming language, *FISH*, and its application in *UDEC*.

A beginner's guide to *FISH* is given in [Section 1](#). This section includes a tutorial to help new users become familiar with the operation of *FISH*.

[Section 2](#) contains a detailed reference to the *FISH* language. All *FISH* statements, variables and functions are explained, and examples are given.

A library of common and general purpose *FISH* functions is provided in These functions can assist the user with various aspects of *UDEC* model generation and solution.

[Section 4](#) contains a program guide to *UDEC*'s linked-list data structure. These structures provide direct access to *UDEC* variables.
