

TABLE OF CONTENTS

1 FISH BEGINNER'S GUIDE

1.1	Introduction and Overview	1 - 1
1.2	Beginner's Guide and Tutorial	1 - 2

2 FISH REFERENCE

2.1	Introduction and Overview	2 - 1
2.2	FISH Language Rules, Variables and Functions	2 - 2
2.2.1	Lines	2 - 2
2.2.2	Reserved Names for Functions and Variables	2 - 3
2.2.3	Scope of Variables	2 - 10
2.2.4	Functions: Structure, Evaluation and Calling Scheme	2 - 10
2.2.5	Data Types	2 - 12
2.2.6	Arithmetic: Expressions and Type Conversions	2 - 13
2.2.7	Strings	2 - 14
2.2.8	Deleting and Redefining FISH Functions	2 - 15
2.3	FISH Statements	2 - 17
2.3.1	Specification Statements	2 - 17
2.3.2	Control Statements	2 - 18
2.3.3	UDEC Command Execution	2 - 21
2.4	Linkages to UDEC	2 - 23
2.4.1	Modified UDEC Commands	2 - 23
2.4.2	Execution of FISH Functions	2 - 24
2.4.3	Error Handling	2 - 28
2.4.4	Fishcall	2 - 28
2.5	Predefined Functions, Variables and Arrays	2 - 31
2.5.1	UDEC -Specific Scalar Variables	2 - 31
2.5.2	General Scalar Variables	2 - 33
2.5.3	UDEC -Specific Model Variables	2 - 34
2.5.4	Intrinsic Functions	2 - 43
2.5.5	Special Functions – Tables and Memory Access	2 - 45
2.5.5.1	Tables	2 - 45
2.5.5.2	Special Functions to Access Memory Directly	2 - 48
2.5.6	Access to UDEC 's Data Structures	2 - 51
2.5.7	Determining Failure States of Zones	2 - 53
2.6	FISH I/O Routines	2 - 57
2.7	Socket I/O Routines	2 - 61

4 PROGRAM GUIDE

4.1	Linked-List Addresses and Offsets	4- 1
4.2	Main Data Group “.FIN” Files	4- 7
4.2.1	“BLOCK.FIN”	4- 7
4.2.2	“BOUCNR.FIN”	4- 12
4.2.3	“CONTACT.FIN”	4- 15
4.2.4	“DOMAIN.FIN”	4- 18
4.3	Structural Element Data Group “.FIN” Files	4- 20
4.3.1	“CABLE.FIN”	4- 20
4.3.2	“REINF.FIN”	4- 22
4.3.3	“STR.FIN”	4- 23
4.3.4	“SUPPORT.FIN”	4- 27
4.4	Local Material Model and Properties Data Group “.FIN” Files	4- 29
4.4.1	“JMAT.FIN”	4- 29
4.4.2	“ZMAT.FIN”	4- 32

TABLES

Table 1.1	Commands that directly refer to FISH names	1 - 4
Table 2.1	List of words in UDEC and FISH that may conflict with chosen names	2 - 4
Table 2.2	Assigned fishcall IDs	2 - 29
Table 2.3	Failure states	2 - 53
Table 4.1	Global indices and include file names for main data groups	4 - 6
Table 4.2	Global indices and include file names for structural element data groups	4 - 6
Table 4.3	Extension indices and include file names for local material properties	4 - 6

FIGURES

Figure 1.1	Model constructed in Example 1.9	1 - 9
Figure 1.2	Model constructed in Example 1.13	1 - 14
Figure 2.1	Plot of log of incremental displacement versus friction angle	2 - 27
Figure 4.1	Linked lists for main data arrays IBPNT : block_head IDPNT : domain_head ICPNT : contact_head	4 - 2
Figure 4.2	Block linkage and reverse corner links	4 - 3
Figure 4.3	Domain linkages	4 - 4
Figure 4.4	Convention used for linkages within a contact array	4 - 5

EXAMPLES

Example 1.1	Defining a FISH function	1 - 2
Example 1.2	Using a variable	1 - 3
Example 1.3	SET ting variables	1 - 3
Example 1.4	Test your understanding of function and variable names	1 - 4
Example 1.5	Capturing the history of a FISH variable	1 - 4
Example 1.6	FISH functions to calculate bulk and shear moduli	1 - 6
Example 1.7	Using symbolic variables in UDEC input	1 - 7
Example 1.8	Controlled loop in FISH	1 - 7
Example 1.9	Applying a nonlinear initial distribution of moduli	1 - 8
Example 1.10	Splitting lines	1 - 10
Example 1.11	Variable types	1 - 10
Example 1.12	Action of the IF ELSE ENDIF construct	1 - 12
Example 1.13	Automated placing of cable elements	1 - 12
Example 2.1	Initializing and printing FISH arrays	2 - 9
Example 2.2	Construction of a function	2 - 10
Example 2.3	A recursive function call	2 - 11
Example 2.4	Removing recursion from the function shown in Example 2.3	2 - 11
Example 2.5	Evaluation of variables	2 - 12
Example 2.6	Control of interactive input	2 - 14
Example 2.7	Attempting to redefine a FISH function	2 - 15
Example 2.8	Usage of the CASE construct	2 - 19
Example 2.9	FISH function with generic zone handling capability	2 - 25
Example 2.10	Using string variables	2 - 26
Example 2.11	Controlling a series of UDEC runs	2 - 26
Example 2.12	Listing of "FISHCALL.FIS"	2 - 29
Example 2.13	Illustration of fishcall use	2 - 29
Example 2.14	Insertion sort of 20 random numbers	2 - 49
Example 2.15	Using table_head	2 - 52
Example 2.16	Plasticity states	2 - 54
Example 2.17	Printing zone plasticity states	2 - 55
Example 2.18	Using the FISH I/O functions	2 - 59
Example 2.19	Server data file	2 - 62
Example 2.20	Client data file	2 - 62
Example 4.1	Data File "BLOCK.FIN"	4 - 7
Example 4.2	Data File "BOUCNR.FIN"	4 - 12
Example 4.3	Data File "CONTACT.FIN"	4 - 15
Example 4.4	Data File "DOMAIN.FIN"	4 - 18
Example 4.5	Data File "CABLE.FIN"	4 - 20

Example 4.6	Data File “REINF.FIN”	4 - 22
Example 4.7	Data File “STR.FIN”	4 - 23
Example 4.8	Data File “SUPPORT.FIN”	4 - 27
Example 4.9	Data File “JMAT.FIN”	4 - 29
Example 4.10	Data File “ZMAT.FIN”	4 - 32
